IP 66

MODE PRIVATE

ROTATING

SAFELY MONITOR YOUR OUTDOORS.

Easy to install and discreet, it helps you keep access to your home secure by sending notifications to your smartphone whenever motion is detected.
The Internet-connected camera allows you to monitor your home or any other area with ease. Wherever you are, via your iPhone or Android smartphone, you can remotely view video, take a live photo or begin video recording.

MOTION DETECTION
The motion detection feature allows you to receive an push notification in the event of an intrusion.

NIGHT VISION
The camera is equipped with infrared LEDs for night vision.

IP66
The camera is designed to withstand and function in all outdoor conditions without any additional protection.

MOTORISED
The motors built into your camera give you 180° remote control over its position

PRIVATE MODE
Your camera's video and sound can easily be switched off when you are present: only monitor when necessary.

ENSURE YOUR HOME AND YOUR LOVED ONES ARE PROTECTED BY SURVEILLANCE

Your camera has a high-quality two-directional 1080p image and sound (microphone and speaker). When movement is detected while the camera is in surveillance mode, you will receive a message on your smartphone, and your camera will record a video on a microSD card (not included), which you can view remotely.

ENJOY YOUR DAILY LIFE WITHOUT THE FEELING OF BEING WATCHED

The camera has a private mode: it can disable its microphone, speaker and images when you're home. Your camera knows how to be discrete and respectful of your private life when its protection isn't needed.

SIT BACK AND RELAX: LET AVIDSENHOME TAKE CARE OF IT FOR YOU

The camera is an integral part of the AvidsenHome range, which allows you to set real life scenarios, so you don't have to think about your products. If you have Avidsen HomeLight bulbs or AvidsenHome shutter controls in your home, you can automatically simulate your presence at dusk or dawn while you are away. If you have an Avidsen alarm or thermostat in your home, it is easy to programme your camera to activate movement detection or private mode according to your presence. Then you can sit back and relax, the rest will be taken care of for you!
