Designed with your security in mind

With both motion and human detection, you can use the Philips WelcomeEye Look to detect and track a moving intruder whether you're home or away.
You'll be notified on your smartphone, where you can watch the video as the camera's motor moves.
You can trigger the siren, or listen or speak to your visitor through the app. You can also watch a complete recording saved on the camera's memory card.

70% of the camera's plastic parts are **from recycled sources.**

The pack itself is made of recycled materials and is **100% recyclable**: cardboard handle, cardboard and paper packing material, cardboard packaging for screws.

Compatible with Google and Alexa voice assistants

For example, if the speaker has a screen, you can ask the speaker to display the live video and sound from the camera on the screen.

works with the Google Assistant

Built-in 90 dB siren

You can set your camera to automatically sound the alarm whenever a human being is detected or choose to only sound the alarm manually when you see from a distance that it is necessary. The powerful sound is a total deterrent that enables you to discourage intruders.

+ features

Motorised camera with no blind spot

It can move on a horizontal axis of 355°. Its viewing angle is 80°. This wide range provides a very large visual field without any blind spots. This allows you to monitor the entire access to your home. Motion detection with adjustable time slots and sensitivity.

Field of view
360°

Auto tracking feature: allows you to locate, isolate and follow a human silhouette with accuracy and efficiency. As a result, the detected intruder is tracked by the camera lens.

Human shape recognition: filters out other movements to prevent false alarms.

High-resolution image

The WelcomeEye Look camera displays a smooth image on your smartphone when you view a recording or live video. The camera displays a 2K image resolution of 2560 x 1440 pixels.

Night vision

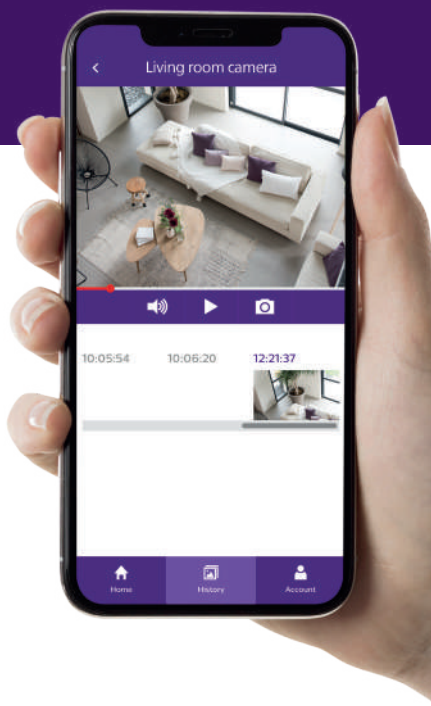
You can also use night vision thanks to the infrared LEDs that provide discrete surveillance. You control your home day and night.

Private mode feature

The camera is equipped with a private mode that completely obscures its lens in your presence and mutes the microphone and the speaker. Your camera knows how to be discrete and respectful of your private life when its monitoring is not required.

PHILIPS

Technical features



Reliable and secure application, ‘Made in France’ design

The camera and its features were designed and built by our product managers in France. Its app servers are also located in France, keeping your information secure.

All data and images in transit are encrypted to prevent hacking.

The camera is activated in the blink of an eye with no tedious configuration, thanks to its Bluetooth and 2.4GHz and 5GHz WiFi connectivity.

Everyday convenience

As a full member of the Philips WelcomeEye range, you use the same app for your videophone and camera.

Your camera is more than just a surveillance camera:

- For example, its human shape detection can alert you to when your children come home from school from the same app.
- You can also install it in the home of a loved one (e.g. elderly or disabled persons) so as to be informed of any problem.
